

Technical Description: Client-Side Portal

Overview

The client-side portal provides users with a comprehensive set of tools to manage various aspects of their business operations efficiently. This includes functionalities for login, task management, contacts, pipeline tracking, job management, quotes, purchases, accounting, scheduling, reporting, and forms. The portal is designed to enhance user productivity and streamline workflows.

Functionalities

1. Login

****Objective****: Securely authenticate users and provide access to the portal.

****Features****:

- ****Authentication Options****: Users can log in using their mobile number or email ID.
- ****Verification****: OTP or Authorization App for secure login.

2. Dashboard

****Objective****: Provide a centralized view of key metrics and actions.

****Features****:

- ****Timeline****: Overview of recent activities and updates.
- ****Quick Actions****: Add and modify actions related to Contacts, Jobs, Quotes, and Invoices.

- **Daily Tasks**: Display and manage daily tasks.

3. Contacts

Objective: Manage contact information and group contacts for efficient communication.

Features:

- **Add Contact**: Create new contact entries.
- **Group Contacts**: Organize contacts by Company, Location, or Zone.

4. Pipeline

Objective: Track and manage leads throughout their lifecycle.

Features:

- **All Leads**: View and manage all leads.
- **Lead Types**: Categorize leads as Lost, Converted, or Deleted.

5. Jobs

Objective: Manage job-related activities and profiles.

Features:

- **Active Jobs**: View and manage ongoing jobs.
- **Recurring Job Profiles**: Set up and manage recurring jobs.
- **Completed Jobs**: Track jobs that have been completed.

- **Job Type Templates**: Utilize templates for different job types.
- **Deleted Jobs**: Access and manage deleted job entries.

6. Quotes

Objective: Create and manage quotes for clients.

Features:

- **Templates**: Use predefined templates for creating quotes.
- **Create Quote**: Generate new quotes as needed.

7. Purchases

Objective: Manage inventory and purchasing details.

Features:

- **Items**: List and manage items for sale, including price and quantity.
- **Tax**: Define and manage different types of tax for invoices and items.

8. Accounts

Objective: Handle accounting and financial aspects.

Features:

- **Integrate Accounting Software**: Connect with Xero and QuickBooks.
- **Stock Takes**: Manage inventory and stock levels.

9. Scheduling

****Objective****: Schedule and manage appointments and tasks.

****Features****:

- ****Calendar****: View and manage scheduled activities.

10. Reports

****Objective****: Generate and view various reports.

****Features****:

- ****Report Types****: Generate reports for Contacts, Task Logs, Reminders, Quotes, Invoices, Purchases, Emails, Jobs, and Leads.

11. Users

****Objective****: Manage user accounts and permissions.

****Features****:

- ****Create Users****: Add new users to the system.
- ****Groups****: Organize users into groups.
- ****Guest Pass****: Manage guest access.
- ****User Logs****: View logs of user activities.

12. Assets

****Objective****: Manage and track assets.

****Features****:

- ****Asset Register****: Maintain a register of all assets.
- ****Asset Types****: Define and manage different types of assets.
- ****Add Asset Type****: Create new asset categories.
- ****Asset Resources****: Track resources associated with assets.
- ****Import Assets****: Import asset data into the system.

13. Forms

****Objective****: Create and manage forms for various purposes.

****Features****:

- ****Add New Template****: Create new forms from scratch.
- ****Customizable Forms****: Edit over 70 existing forms as per customer requirements.
- ****Technician Access****: Technicians can access and fill out forms via the app.

14. Integration

****Objective****: Integrate with external services for enhanced functionality.

****Features****:

- ****Online Payment Methods****: Implement payment portal integration.

- ****Accounting Software****: Integration with Xero and QuickBooks for seamless accounting operations.

Conclusion

The client-side portal is designed to provide a robust set of features to manage various business operations efficiently. With functionalities ranging from login and dashboard management to comprehensive tools for contacts, jobs, quotes, purchases, accounting, and forms, the portal aims to enhance user experience and streamline business processes.

Technical Description: Super Admin Portal

Overview

The Super Admin Portal is a critical component of the portal development project designed to provide comprehensive management capabilities for administrators overseeing the entire system. The Super Admin role includes functionalities for managing clients, handling subscriptions, overseeing new leads, and role management.

Functionalities

1. Client Management

****Objective****: To efficiently manage client accounts and their subscriptions.

****Features****:

- ****Client Account Creation****: Ability to create, update, and delete client accounts.
- ****Subscription Management****:
 - ****View Subscriptions****: Access a list of all active and expired subscriptions.
 - ****Create Subscriptions****: Set up new subscriptions with options for monthly or yearly plans.
 - ****Update Subscriptions****: Modify existing subscriptions including plan changes and renewal settings.
 - ****Cancel Subscriptions****: Terminate subscriptions and handle refund processes if necessary.

2. New Leads Management

****Objective****: To capture and manage new leads for potential client acquisition.

****Features****:

- **Lead Capture**: Integration with the website to automatically input new lead information into the system.
- **Lead Tracking**: Monitor lead status and follow-up actions.
- **Lead Assignment**: Assign leads to specific team members for follow-up.

3. Role Management

Objective: To manage user roles and permissions within the portal.

Features:

- **Create and Manage Roles**: Define new roles with specific permissions and responsibilities.
- **Assign Roles**: Allocate roles to users based on their responsibilities.
- **Edit and Delete Roles**: Modify or remove roles as required to adjust to changing organizational needs.

Technical Specifications

Backend

- **Database**: Structured database tables to store client details, subscription plans, lead information, and role definitions.
- **APIs**: RESTful APIs for communication between the Super Admin Portal and backend services.
 - **Client Management API**: Endpoints for CRUD operations on client accounts and subscriptions.
 - **Lead Management API**: Endpoints for managing lead data and status updates.
 - **Role Management API**: Endpoints for creating, updating, and assigning roles.

Frontend

- **Dashboard**: A comprehensive dashboard displaying key metrics and notifications.
- **Client Management Interface**: Forms and tables to view and manage client data and subscriptions.
- **Lead Management Interface**: Tools to view, assign, and track new leads.
- **Role Management Interface**: Interfaces to manage roles and permissions effectively.

Security

- **Authentication and Authorization**: Secure login and role-based access control to ensure only authorized users can access specific functionalities.
- **Data Protection**: Implementation of encryption and data protection measures to safeguard sensitive information.

Integration

- **Website Integration**: Interface with the website to capture new leads seamlessly.
- **Mobile and Web App Integration**: Ensure compatibility and data synchronization with the client web app and mobile app for technicians.

Conclusion

The Super Admin Portal is designed to streamline administrative tasks, enhance client and subscription management, and provide robust role management features. By integrating these functionalities, the portal aims to offer a comprehensive solution for efficient administrative operations.

Technical Description: Technician Mobile App

Overview

The Technician Mobile App is designed to support technicians in the field by providing a comprehensive suite of tools to manage jobs, track activities, and access client information. The app facilitates efficient job execution and documentation, ensuring a smooth workflow for technicians.

Functionalities

1. Login

****Objective****: Securely authenticate technicians and grant access to the app.

****Features****:

- ****Authentication****: Login using secure credentials.

2. Dashboard

****Objective****: Provide an overview of key metrics and upcoming tasks.

****Features****:

- ****Overview****: Display a summary of upcoming jobs, tasks, and notifications.

3. Calendar

****Objective****: Manage and view scheduled jobs and appointments.

****Features****:

- ****Job Schedule****: View jobs scheduled for the next 10 days and the previous 10 days.

4. Jobs

****Objective****: Manage job-related activities and information.

****Features****:

- ****Portfolio****: Access and manage job portfolios.
- ****Map****: View job locations on a map for navigation.
- ****Burger Menu****: Limited to view (Add, Update, Delete options are restricted).

5. Lead

****Objective****: Manage and track leads.

****Features****:

- ****Lead Management****: View and update lead information as required.

6. Job Creation

****Objective****: Create and manage new jobs.

****Features****:

- **Job Details**: Input details such as Service Cover, Site Risk Assessment, Floor Plan (if available), and Device List.
- **Inspection Points**: Use QR codes or barcodes to scan and record inspection points.

7. Invoice and Quote

Objective: Generate and manage invoices and quotes.

Features:

- **Create Invoice**: Generate invoices for completed jobs.
- **Create Quote**: Create and manage quotes for potential jobs.

8. Documents

Objective: Manage essential documents related to jobs.

Features:

- **SDS (Safety Data Sheets)**: Access and view safety data sheets.
- **SWMS (Safe Work Method Statements)**: Access and view work method statements.
- **Insurance**: Access insurance documents as needed.

9. Notes

Objective: Maintain and access important notes.

Features:

- **Sticky Notes**: Add and view sticky notes for quick reference.

10. View Client

Objective: Access client information and special notes.

Features:

- **Client Basic Information**: View details such as location, name, and phone number.
- **Special Notes**: Read special notes relevant to the technician about the client.

11. Start Job

Objective: Initiate job-related processes.

Features:

- **Select Service Cover**: Choose the type of service cover.
- **Routine Visit**: Document routine visits.
- **Follow Up**: Record follow-up actions.
- **Call Out**: Manage call-out details.
- **Site Risk Assessment**: Perform and record site risk assessments.
- **Floor Plan**: View floor plans if available (visual only).

12. Device List

Objective: Track inspection devices and equipment.

****Features**:**

- ****Scan QR or Barcode****: Scan devices for inspection points.

13. Activity

****Objective****: Track and record job activities.

****Features**:**

- ****Activity Type****: Record type of pest, area, and activity level (High, Low, Medium, Caught).
- ****Treatment Details****: Document chemical use, amount, batch number, and equipment used.
- ****Application Type****: Specify the application type and targeted pest.
- ****Additional Notes****: Add any relevant notes about the activity.
- ****Weather****: Record weather conditions during the job.
- ****Recommendation****: Provide recommendations with type, notes, and urgency level.

14. Photos

****Objective****: Capture and manage job-related photos.

****Features**:**

- ****Upload Photos****: Take and upload photos related to the job.

15. Open Task

****Objective****: Manage and track tasks.

****Features**:**

- ****Task Types****: Record task type (open, close).
- ****Service Notes****: Document notes related to the service.

16. Job Overview

****Objective****: Provide a comprehensive summary of the job.

****Features****:

- ****Customer Signature****: Capture customer signature for job completion.
- ****Technician Signature****: Capture technician signature for job completion.

17. Notifications

****Objective****: Keep technicians informed about important updates.

****Features****:

- ****Service Cover****: Notifications related to service cover details.
- ****Service History****: Access history of previous services, including reports and visit notes.
- ****Activity****: Notifications about recent activities and preparations.
- ****Recommendation****: Notifications about recommendations and urgency.

Conclusion

The Technician Mobile App is designed to equip technicians with the tools they need to efficiently manage jobs, track activities, and access client information while in the field. With features for job management, document handling, client interactions, and real-time updates, the app aims to streamline

workflows and enhance productivity.
